-Click on Expand to expand details of column

The screenshot shows the Power Query Editor interface. The main data view displays a table with columns 'ShipCountry' and 'Customer'. A dialog box titled 'Expand' is open, showing the 'Expand' radio button selected. The 'Use original column name as prefix' checkbox is also checked. The 'Columns' list includes '(Select All Columns)', 'OrderID', 'ProductID', 'UnitPrice', 'Quantity', and 'Discount'. The 'OK' button is highlighted.

-New Column will appear

The screenshot displays the Power Query Editor window. The top ribbon includes tabs for File, Home, Transform, Add Column, View, Tools, and Help. The 'Add Column' tab is active, showing options like Conditional Column, Index Column, Duplicate Column, Merge Columns, Extract, Format, Parse, Statistics, Standard Scientific, Trigonometry, Rounding, Information, Date, Time, and Duration. The main area shows a query named 'Table' with the formula bar containing: `= Table.AddColumn(#"Expanded Order_Details", "Stock_Value", each [Order_Details.UnitPrice]*`. The data table has columns: Is.Discount, Order_Details.Order, Order_Details.Product, Shipper, and Stock_Value. The Stock_Value column is highlighted in green. The table contains 10 rows of data. The right sidebar shows 'Query Settings' with 'PROPERTIES' (Name: Orders) and 'APPLIED STEPS' (Add...). The bottom status bar indicates '25 COLUMNS, 999+ ROWS' and 'Column profiling based on top 1000 rows'.
